

INTERNSHIP PROJECT PORTFOLIO REPORT

Prepared By: Bhavya Anand

Role: Frontend Developer

Date: June 24, 2026

Executive Summary

This report presents a comprehensive overview of the website development projects completed during the internship period. The projects demonstrate progressive learning and practical implementation of modern web development technologies, ranging from fundamental front-end development using HTML, CSS, and JavaScript to advanced full-stack applications built with React, Next.js, TypeScript, Supabase, MongoDB, and Stripe.

A total of thirteen projects were successfully designed and developed. These projects showcase proficiency in responsive web design, user interface development, API integration, cloud-based data management, authentication systems, state management, and modern software engineering practices.

The portfolio reflects a strong understanding of both client-side and server-side development concepts and highlights the ability to build scalable, user-centric applications.

Internship Objectives

The primary objectives of this internship were:

- To strengthen front-end development skills.
 - To gain practical experience with modern JavaScript frameworks.
 - To understand API integration and asynchronous programming.
 - To develop responsive and interactive web applications.
 - To explore cloud databases, authentication systems, and deployment workflows.
 - To learn industry-standard development practices and project structuring.
-

Project Portfolio Overview

1. Personal Portfolio Website

Technologies Used

- HTML
- CSS
- JavaScript

Project Description

A professional portfolio website designed to showcase personal information, technical skills, and completed projects.

Key Features

- Responsive design for multiple devices.
- Smooth scrolling navigation.
- Interactive contact section.
- Modern user interface design.

Learning Outcomes

- Website structuring using semantic HTML.
 - CSS Grid and Flexbox layouts.
 - DOM manipulation and event handling.
-

2. Digital Clock

Technologies Used

- HTML
- CS
- JavaScript

Project Description

A real-time digital clock application with support for multiple display formats and themes.

Key Features

- 12-hour and 24-hour display modes.
- Dark and light theme switching.
- Real-time updates.

Learning Outcomes

- Time and date manipulation in JavaScript.
 - CSS custom properties.
 - Dynamic UI updates.
-

3. To-Do List Application

Technologies Used

- HTML5
- CCSS
- JavaScript
- Local Storage

Project Description

A task management application allowing users to create, update, complete, and delete tasks.

Key Features

- Task creation and deletion.
- Completion status tracking.
- Persistent storage using Local Storage.
- User-friendly interface.

Learning Outcomes

- CRUD operations.
 - Data persistence in browsers.
 - State management techniques.
-

4. Calculator Application

Technologies Used

- HTML5
- CSS
- JavaScript

Project Description

A fully functional calculator capable of performing basic arithmetic operations.

Key Features

- Keyboard support.
- Error handling mechanisms.
- Responsive design.

Learning Outcomes

- Event-driven programming.
 - Expression evaluation.
 - Input validation and exception handling.
-

5. Async Weather Tracker

Technologies Used

- HTML5
- CSS3
- JavaScript
- OpenWeather API

Project Description

A weather application that retrieves real-time weather information for user-selected cities.

Key Features

- Live weather updates.
- Search history functionality.
- API integration.
- Error handling and data caching.

Learning Outcomes

- REST API consumption.
 - Asynchronous programming using Async/Await.
 - JSON data processing.
-

6. Random Quote Generator

Technologies Used

- HTML5
- CSS3
- JavaScript

- DummyJSON API
- Web Speech API

Project Description

An interactive quote generation platform with sharing and speech functionalities.

Key Features

- Random quote generation.
- Text-to-speech support.
- Social media sharing.
- Clipboard copy functionality.

Learning Outcomes

- Browser APIs integration.
 - External data fetching.
 - Progressive enhancement techniques.
-

7. Password Generator

Technologies Used

- HTML5
- CSS3
- JavaScript

Project Description

A security-focused utility that generates customizable passwords.

Key Features

- Adjustable password length.
- Character type selection.
- Password strength indicator.
- Copy-to-clipboard functionality.

Learning Outcomes

- Randomization algorithms.
 - Form validation.
 - Security-focused application design.
-

8. Image Slider (React)

Technologies Used

- React 18
- Vite
- CSS3

Project Description

A React-based image carousel featuring automatic and manual navigation controls.

Key Features

- Auto-slide functionality.
- Previous and next navigation.
- Indicator controls.
- Responsive design.

Learning Outcomes

- React Hooks.
 - Component lifecycle management.
 - State management with useState and useEffect.
-

9. Expense Tracker

Technologies Used

- HTML5
- CSS3
- JavaScript
- Chart.js

Project Description

A financial tracking application for monitoring income and expenses.

Key Features

- Expense categorization.
- Income and expense tracking.
- Dynamic charts and visualizations.
- Local storage support.

Learning Outcomes

- Data visualization.
 - Financial calculations.
 - Third-party library integration.
-

10. Movie Search Application

Technologies Used

- HTML5
- CSS3
- JavaScript
- OMDb API

Project Description

A movie database application that allows users to search and view detailed movie information.

Key Features

- Movie search functionality.
- Detailed information display.
- Rating comparison.
- Favorites management.

Learning Outcomes

- API integration.
 - Dynamic content rendering.
 - Advanced UI design patterns.
-

11. CoSoStyle E-Commerce Platform

Technologies Used

- Next.js 16
- React 19
- TypeScript
- Tailwind CSS v4
- MongoDB
- Stripe

Project Description

A modern e-commerce platform developed for a premium clothing brand.

Key Features

- Product catalog management.
- Authentication setup.
- Shopping cart functionality.
- Payment gateway integration.

Learning Outcomes

- Full-stack application architecture.
 - TypeScript development.
 - Database modeling and payment integration.
-

12. CoSoStyle Website Mockup

Technologies Used

- Next.js 16
- React 19
- TypeScript
- Tailwind CSS v4

Project Description

A prototype version of the CoSoStyle platform used for UI and user experience experimentation.

Key Features

- Responsive layouts.
- Dark and light modes.
- Component-based architecture.

Learning Outcomes

- UI prototyping.
 - Design system implementation.
 - Front-end architecture planning.
-

13. Wardrobe AI

Technologies Used

- React 18
- Vite
- Tailwind CSS
- Supabase

Project Description

An AI-assisted wardrobe management platform that enables users to organize clothing items and create outfit plans.

Key Features

- User authentication.
- Clothing image uploads.
- Outfit management.
- Weekly outfit planner.

Learning Outcomes

- Cloud database integration.
 - Authentication workflows.
 - File storage management.
-

Technical Skills Acquired

During the internship, the following technical skills were strengthened:

Programming Languages

- HTML5
- CSS3
- JavaScript (ES6+)
- TypeScript
- SQL

Frameworks and Libraries

- React.js
- Next.js
- Tailwind CSS

- Chart.js
- Framer Motion

Databases and Cloud Services

- MongoDB
- Supabase

APIs and Integrations

- OpenWeather API
- OMDb API
- Stripe Payment Gateway
- RESTful APIs

Development Tools

- Git and GitHub
 - npm
 - Vite
 - ESLint
 - PostCSS
-

Challenges Encountered

Throughout the internship, several technical challenges were addressed, including:

- Managing asynchronous API requests.
- Implementing responsive designs across multiple devices.
- Integrating third-party APIs and services.
- Handling state management in React applications.
- Designing scalable component architectures.
- Configuring authentication and database services.

Successfully overcoming these challenges significantly enhanced problem-solving and debugging capabilities.

Conclusion

The internship provided valuable hands-on experience in modern web development and software engineering practices. Through the successful completion of thirteen projects,

practical knowledge was gained in front-end development, full-stack architecture, API integration, cloud technologies, and user experience design.

The experience strengthened both technical and analytical skills while providing exposure to industry-standard tools and workflows. The projects completed during this internship establish a strong foundation for future software development and engineering roles.
